after years of searching and study at a certain moment i realized and i remembered the little know how most ham s have about propagation why should i not share my to day knowledge with my hobby friends why don t you write a book about propagation yes why not but there are so many books about propagation why one more book and does i have something else or something new to tell about this subject my answer was always if i ever write a book than it must be one completely different in concept than the existing ones it must not only repeat what was found in the various exiting books explaining the different ionospheric properties and propagation possibilities and phenomena it must at least also answer the many questions i often did put questions as why how where and when to the reasons or causes or origins of all these different behaviors or rather equally repeating never ending propagation variations from experience i know illustrations of all kinds sketches graphs diagrams are explaining much better than plain text can do also i realized that animated graphs and diagrams can even better express certain behaviors and phenomena when you can follow in an animated way the chronological changes you get a picture in an extra dimension i started compiling animations and presenting them in a presentation wizard these animations and other extra study documents are downloadable each illustration in the book is in color to express a clear picture
